

Technology

- Post notes in class
- We should use computers & laptops more often & I like the teachers website
 - if absent
 - if forgot to write homework
- District should supply i-pads or laptops to all students, so they don't have to carry out text books & laptops or computers to do hw. That way everyone will do their hw & not have an excuse no to plus, you can't not read a persons handwriting.
- I made a blog for my history class to prep for tests which really helped. We discussed questions that could appear and read each other's practice essays
- Don't have access
- THEFT PROBLEMS...my stuff got stolen all the time
- I love facebook
- Many students don't have any computers in their home. During a group project, I was the only member to have a printer @ home. I found this SHOCKING
- Setting up courses online → maybe discussion boards w/teachers?
- Allow teachers to choose which equipment they update
- Turning in class work online or getting instant feedback
 - assignments online, saves paper
- Instant feedback → webdesign
- Require teachers to keep a blog/website so students can keep track of missed work
- Have online text book available
- Kindle for student so they don't have to carry heavy books or a class set?
- Turn in assignments through email so an save paper & people won't have to worry about printing
- Homework hotline!
- All teachers should have websites & should have to update them w/info about homework for the day & what class worked on in class
- Teacher Facebook!

- Advanced technology is good (like online textbooks) but there still should be written textbooks (Preferably 2 copies, 1 for home one for school, so I don't break my back from carrying them)
- Homework hotline
- Technology could lose personal connection → be sure to have active communications
- Don't lose use of actual textbooks. Offer both online textbook & physical textbooks.
- More access to use the smart boards during class it helps to learn visually
- Document cameras in all classes. Teachers know how to use (take class?)
- YOUTUBE (teacher access?)
 - For languages, student/teachers could show music videos in a foreign language
 - for presentations use appropriate videos/documentaries (fun way to learn)
- Time to socialize is good
- Computers that work
- Kindle built into desks
- More family access
- Faster computers
- Macintosh's
- YOUTUBE
- More computers per classroom
- Music during study hall
- Alpha smart
- Inspiration
- Get word out from ISD using social networks
- Decriminalize cell phones
- Pay phones
- Document cameras are nice
- We don't use smart boards → good for elementary but not used a lot for high school
- Teacher could put worksheets or copies of assignment to print out as paper

- Technology like cell phones and such could be used as a way to remind ourselves about HW instead of having to write in a planner all the time
- More research websites could be a plus for assignments
- Teachers all having websites would allow for flexibility in finding HW and teachers could post information through there too.
- Technology and Technology oriented classes
- Social net-working class
- Tech classes like Newport
- Keep up with operating systems
 - Win 7
 - Win Vista
- Ability to use MAC
- Listen to IPOD during work time
- Use less paper
- Facebook homework
- Teachers have their own websites
- Ebooks
- Ebay business class
- Music creation thru technology
- Homework hotline helps
- Require teachers to electronically post class work /HW (I know this is Difficult but it would help so much)
- Encourage better teacher communication (side comment: agreed!!)
 - answering simple emails, encouraging more access to teacher phones, emails, etc)
- More online classes that are more affordable (good for self learners)
- More use of online HW turn-in sites like webassign even turnitin for papers
- Opportunities for advanced tech use in sciences, etc
- Teachers help look at papers before turning in (review)
- Bring in laptops from home
- New computers
- Online textbooks
- Discussion forums with students

- Class forums
- Teacher facebook—use group site to post class info
- Class forums
- Idea spreading
- Information
- Online textbooks
- Repetition
- Opportunities to learn out of the classrooms
- Homework hotline
- Updated websites
- Education of teachers on how to use technology
- Teachers educated in websites too, for student integration
- Tech issues:
 - theft
 - damage
 - money status
 - attachment to physical book
 - expensive
 - physical/classroom interactions important
- Online textbooks
- Active boards and newer tech can be really beneficial, many schools do not have them/can't use them efficiently (PLMS has really good tech advancements, students learning better) → I liked the tech involvement, can really help make learning more active & involved
- Class forums or subject forums (side comment: I agree!)
- All teachers should be required to have websites. Some don't and this makes it very difficult for students
- It would be a lot better if the internet in high schools were less strict. Sometimes it renders good educational/research websites from being accessed because of filtered keywords—happened to me many times

- All teachers should have and IM account on MSN, yahoo, AIM etc
many teachers don't get to their emails in time even though it was sent at an appropriate time. IM would make communicating easier.
-I don't think this is a good idea; teachers spend enough time on their students they don't need to be pestered on their own time. Yeah, this would be a really bad idea, the teacher would not agree. Maybe if we had a website for classmates to discuss? Like ask questions?
- New ideas for technology
 - we could use laptops more in class → at skyline we do, but they are not always necessary. Alter teaching style to make more accessible
 - we could increase the use of teacher websites in the "wiki" style, so students can post up their notes (in case some people didn't get them in class) post questions, comments, etc
 - More computers in library
 - FB pages for certain subject, like a "Skyline IBMM1" group. Very quick & easy to access. →Some teachers do. It's very useful and easy to communicate w/them and other students about questions they have about what they are learning
